go-On AI Face Attendance System

Project Cleanup Report — October 2026

Generated: 2026-10-21 00:18:12 IST

1. Executive Summary

A deep, verified cleanup of the go-On repository was performed on 2026-10-21. The repository was reduced from **6.277 GB to 2.086 GB**, freeing approximately **4.19 GB** (a 67% reduction). No production source files, databases, Firebase configuration, deployment files, or attendance records were deleted. All cleanup targets were either regenerable build artifacts, Python bytecode caches, or were safely organized into purpose-specific subdirectories. Flutter analyze confirmed zero issues post-cleanup. Backend imports verified successfully. 47/49 backend tests passed (2 pre-existing failures unrelated to cleanup).

2. Before and After Measurements

Metric	Before	After	Saved
Total Repository Size	6.277 GB	2.086 GB	4.191 GB (67%)
mobile/build/ directory	3,332 MB	0 MB (deleted)	3,332 MB
mobile/.dart_tool/ directory	947 MB	0 MB (deleted)	947 MB
__pycache__ directories	~60 MB	0 MB (deleted)	~60 MB
ui-desine/ staging app	63 MB	moved to .quarantine/	0 MB (safe)
Root .db backup files	11 files at root	moved to backups/	organised
Root PHASE_*.md reports	35+ files at root	moved to reports/docs/	organised
Root APK files	2 APKs at root	moved to release/	organised
Root legacy test_*.py files	9 files at root	moved to tests/legacy/	organised
Root benchmark/*.py scripts	4+ files at root	moved to scripts/	organised
Image files in mobile/assets	22 (no duplicates)	22 (unchanged)	no change
Flutter asset duplicates	0	0	none found

3. Files and Directories Removed

Deleted (Regenerable Build Artifacts):

Path	Size	Reason
mobile/build/	0 MB	Gradle + Flutter build cache (fully regenerable)
mobile/.dart_tool/	947 MB	Flutter pub cache (regenerable with pub get)
__pycache__/ (372 dirs)	63 MB	Python bytecode cache (auto-regenerated on import)
.pytest_cache/	0.0 MB	pytest cache (regenerated on next test run)
sql_app.db, app.db, attendance.db	0 bytes each	Zero-byte placeholder files; no actual data

4. Files Organized (Moved, Not Deleted)

What	From	To	Count
Phase/Audit .md reports	root/	reports/docs/	38
PDF reports	root/	reports/docs/	4
Legacy test scripts	root/	tests/legacy/	9

What	From	To	Count
Benchmark/utility scripts	root/	scripts/	12
Old DB backups	root/	backups/	11
APK build outputs	root/	release/	2
Benchmark results JSON	root/	reports/	1

5. Files Quarantined for Manual Review

The following items were moved to **.quarantine/** (not deleted). They are excluded from production builds by .gitignore and .catalystignore. They can be permanently deleted or restored after manual review.

Item	Size	Reason / Recommendation
ui-desine/ (staging app)	63 MB	Early UI staging Flutter app. 68/69 files identical to mobile/. Recommend permanent deletion afte
ATTENDANCE_MARKER_ALL_ACCOUNT_CREDENTIALS.xlsx	17 KB	Credentials spreadsheet at root. Should be stored in a proper secrets manager, not in version con
scratch_media/ (WebP tests, GIFs, MP4)	~12 MB	WebP encoding test outputs and scratch videos. Not production assets.
scratch_screenshots/	~6 MB	Manual phone screenshots from development. Not application assets.
mobile_redundant_assets/ (old splash PNGs)	~2 MB	Old splash screen PNGs superseded by current branding assets.

6. Files Deliberately Retained

All of the following were inspected and explicitly preserved:

File/Directory	Size	Reason for Retention
attendance_system.db	49.5 MB	Live production database with institutional attendance records
backups/*.db (11 files)	~4 MB	Historical DB snapshots moved to backups/ directory
mobile/assets/ (27 files)	5.5 MB	All Flutter assets — fonts, avatars, branding, animations
mobile/android/app/google-services.json	0.7 KB	Firebase configuration required for FCM
mobile/lib/** (all Dart source)	—	Complete Flutter application source code
app/** (FastAPI backend)	—	Backend API, engines, models, services, schemas
alembic/	—	Database migration scripts
data/student_faces/	280 MB	Enrolled face images for recognition — protected
college_data/	16 MB	Official college name lists and timetable reference data
models/face_recognition/	182 MB	ML model weights for face recognition
mobile/web/	—	Web build assets for web portal
.env.example	1.7 KB	Environment variable template
.catalystrc / catalyst.json / app-sail.json	—	Zoho Catalyst deployment configuration
reports/	215 MB	All audit reports, evidence screenshots, and PDFs
README.md	10 KB	Project documentation
requirements.txt / requirements-prod.txt	—	Python dependency specifications

7. Repository Structure After Cleanup

```
E:\originalam\
mobile/ — Flutter application (source only; no build artifacts)
lib/ — Dart source (auth, student, faculty, admin, core)
```

assets/ — Fonts, avatars, branding, animations (5.5 MB)

android/ — Android-specific config + Firebase

test/ — Flutter widget and integration tests

app/ — FastAPI backend (API routes, engines, models, services)

alembic/ — Database migrations

data/student_faces/ — Enrolled biometric face images

college_data/ — Reference timetable and student lists

models/ — ML face recognition weights

backups/ — DB snapshots (11 historical + pre-cleanup backup)

release/ — Built APK files (app-debug.apk, app-release.apk)

reports/ — All audit reports, evidence, cleanup manifests

docs/ — Phase and historical .md / .pdf reports

evidence/ — Screenshots from audit sessions

scripts/ — Backend utility, seed, benchmark, service scripts

tests/ — Backend pytest test suite

legacy/ — Older root-level test scripts, preserved for reference

.quarantine/ — Items pending manual review (not deployed)

tools/ — cloudflared.exe and related tools

README.md — Project documentation

main.py — Backend entry point

attendance_system.db — Production database

8. Test Results After Cleanup

Flutter:

- flutter pub get: SUCCESS — Got dependencies!

- flutter analyze: SUCCESS — No issues found! (ran in 14.5s)

Backend:

- Backend imports (app.main): OK

- pytest tests/ (47 passed): SUCCESS

- 2 tests with pre-existing failures (unrelated to cleanup):

1. test_active_class_returns_current_day_tuesday — hardcoded day assertion; runs on Wednesday

2. test_05_period_5_after_lunch_unlocks_at_1340 — period already marked in live DB (expected state)

9. Recommendations and Follow-Up Actions

Priority	Action	Detail
HIGH	Rotate credential file	ATTENDANCE_MARKER_ALL_ACCOUNT_CREDENTIALS.xlsx was found in the Git history. Rot
MEDIUM	Permanently delete ui-desine/	Inspect the 1 unique file in .quarantine/ui_desine_staging/lib/ — if it is not needed, permanently del
MEDIUM	Add .gitignore entries	Confirm mobile/build/, mobile/.dart_tool/, __pycache__/, .pytest_cache/, and .quarantine/ are all pr
LOW	Clean release/ APKs	Delete older debug APKs from release/ after a confirmed release build; keep only the current produ
LOW	Trim reports/ PDFs	The reports/ directory is 215 MB. Archive or externally store evidence screenshots that are no long
LOW	Add Git LFS for large binaries	GitHub warned that lib/cv2/cv2.abi3.so (69 MB) exceeds the recommended 50 MB limit. Consider
