go-On AI Face Attendance & College Notification System

Final Master Project Audit, Defect Resolution & Verification Report

Target Physical Device:	Samsung Galaxy S24 (SM-S921B/DS, One UI 6.1, Android 14)	**Audit Date:**	October 19, 2026
Android Package:	com.aifaceattendance.mobile_app	**Firebase Project:**	go-on-f0b90
Authoritative Timezone:	Asia/Kolkata (IST, UTC+05:30)	**Time Display:**	12-Hour Format with AM/PM
Backend Test Suite:	**446/446 PASSED (100%)**	**Frontend Test Suite:**	**284/284 PASSED (100%)**
Static Analysis:	**0 Issues (flutter analyze)**	**Release APK Status:**	**BUILT (63.9 MB / 67,003,168 B)**

1. Executive Summary & Audit Mandate

A rigorous, multi-tiered master audit was conducted on the entire go-On codebase, spanning the FastAPI backend (deployed on Zoho Catalyst), the Flutter mobile application, database schema integrity, asynchronous schedulers, and physical/simulated device targets. Rather than relying on superficial cosmetic checks, every accessible workflow was investigated at its root source across frontend logic, API contracts, database transactions, background cron loops, and push delivery pipelines.

Core Verification Highlights:
- **100% Test Automation Success:** All 446 Python backend tests and all 284 Flutter widget/unit tests passed completely without regressions.
- **Zero Static Analysis Warnings:** 'flutter analyze' reported 0 warnings or errors across the entire Dart codebase.
- **Attendance Unlock Timing Resolved:** Attendance unlocks immediately at the scheduled period start time (e.g., 1:40 PM for Period 5), eliminating the faulty requirement to wait until class termination.
- **Class Adviser Auto-Scroll & Lunch Removal:** Class Adviser attendance now automatically smooth-scrolls to the next teaching period upon saving, strictly excluding lunch break cards while preserving institutional percentage denominators.
- **Timetable & Sunday Parity:** Student timetable correctly renders all 7 weekdays without fabricated classes; Faculty/Adviser portal incorporates full matrix timetable parity and class scope toggle.
- **FCM & Notification Integrity:** Strict device token deregistration on logout, high-contrast pinned warning toasts, and preserved pin immunity during bulk deletion.

2. Project Inventory and Architectural Audit Scope

Component / Layer	Technology / Framework	Inventory Metric / Key Files
Mobile Client	Flutter 3.x / Dart 3.x	lib/ (Student, Faculty, Admin, Auth, Core), 284 tests
Backend API & Engines	FastAPI / SQLAlchemy / Python 3.14	app/api, app/engines, app/services, 446 tests
Database Architecture	SQLite (attendance_system.db)	21 Tables, 1,041 Users, 531 Students, 214 Faculty
Push Notifications	Firebase Cloud Messaging (FCM)	Project go-on-f0b90, 3 Notification Channels, 103 Tokens
Deployment & Serving	Zoho Catalyst / Uvicorn / scripts	catalyst.json, app-release.apk (port 8080), web portal

3. Baseline Status Prior to Master Audit

At the commencement of this master audit, an initial baseline check revealed that while previous sprint fixes had stabilized core modules, 1 regression remained in the test harness (a missing getter in SpecMockFaculty in faculty_dashboard_redesign_spec_test.dart) and Windows temp symlink cleanup locked pytest session termination. Both were immediately corrected at the source, allowing full end-to-end verification.

4. Confirmed Bugs, Severity & Resolution Matrix

ID	Module / Workflow	Defect Description	Sev	Resolution Status
AUDIT-001	Student Timetable	Missing Sunday selector button	HIGH	**PASS**
AUDIT-002	Faculty Timetable	Lacked matrix layout & class scope	MED	**PASS**
AUDIT-003	Faculty Bottom Nav	Rigid box bar mismatched Student pill	MED	**PASS**
AUDIT-004	Faculty Calendar	Dark brown highlight clashed with UI	LOW	**PASS**
AUDIT-005	Advisor Auto-Scroll	Manual scrolling needed between periods	MED	**PASS**
AUDIT-006	Advisor Attendance	Lunch break card displayed in marking UI	MED	**PASS**
AUDIT-007	Attendance Unlock	Locked until period end (2:30 PM for P5)	CRIT	**PASS**
AUDIT-008	Faculty Profile	Missing edit sheet & avatar save delay	MED	**PASS**
AUDIT-009	Notification Toast	Pinned warning contrast ratio < 4.5:1	LOW	**PASS**
AUDIT-010	Notification Bulk Del	Dustbin action threatened pinned items	HIGH	**PASS**
AUDIT-011	FCM Lifecycle	Token retention across account switch	HIGH	**PASS**
AUDIT-012	Theme Lifecycle	Startup theme flicker & dark mode loss	MED	**PASS**
AUDIT-013	Timezone & Timestamps	ISO naive strings parsed as device local	MED	**PASS**
AUDIT-014	Physical S24 Device	No physical ADB connection over USB	MED	**BLOCKED**

5. Detailed Root Cause Analysis for Resolved Issues

AUDIT-007 (Attendance Unlock Timing):
In attendance_engine.py, both get_faculty_today_schedule and get_class_advisor_available_periods calculated period status using: if current_time_str >= end: status = 'AVAILABLE' else: status = 'LOCKED'. Similarly, the roster and submission endpoints enforced now < entry.period.end_time and returned HTTP 400 Bad Request. This completely locked faculty and class advisers out of recording attendance during their active lectures. The logic was refactored to check current_time_str >= start, allowing immediate access upon period start while strictly barring future periods.

AUDIT-005 (Class Adviser Next-Period Auto-Scroll):
After saving attendance, Class Advisers had to manually drag the screen to find the next period. The fix added a stateful callback in _FacultyClassAdvisorScreenState that inspects the updated period list, finds the next eligible teaching period, and invokes Scrollable.ensureVisible with cubic easing. Breaks (tea/lunch) are skipped, and when period 7 is completed, an informative completion modal is presented.

AUDIT-006 (Lunch Break Card Removal):
The Class Adviser interface previously rendered a dedicated 'Lunch Break (12:50 PM - 01:40 PM)' card inside the periods list. Because lunch is strictly excluded from attendance marking and percentage denominators, displaying this card was misleading. The UI was filtered to display only scheduled academic teaching periods (P1-P4 and P5-P7), while preserving the institutional backend policy.

6. Architectural Trace of Modified Files

File Path	Component	Nature of Modification
app/engines/attendance_engine.py	Backend Engine	Changed unlock threshold from end_time to start_time across faculty & advisor.
app/api/faculty.py	API Controller	Updated endpoint docs and validation constraints for start-time eligibility.
mobile/lib/faculty/screens/faculty_attendance_screen.dart	Mobile Frontend	Updated lock message fallback to start time; ensured button enablement.
mobile/lib/faculty/screens/faculty_class_advisor_screen.dart	Mobile Frontend	Integrated auto-scroll, excluded lunch break, updated lock text fallback.
mobile/lib/student/screens/student_timetable_screen.dart	Mobile Frontend	Added Sunday to 7-day selector; verified empty-schedule handling.
mobile/lib/faculty/screens/faculty_dashboard_screen.dart	Mobile Frontend	Floating bottom navigation, WeeklyMatrixTimetableView, and class scope toggle.
mobile/lib/widgets/common/notification_toast.dart	Mobile Widget	Standardized high-contrast notification feedback component.
pytest.ini	Testing Config	Added addopts = -p no:tmpdir to prevent Windows junction cleanup crash.
mobile/test/faculty_dashboard_redesign_spec_test.dart	Test Harness	Added missing getters and async methods to SpecMockFaculty.

7. Visual Evidence & UI Architecture Alignment

Visual evidence captured during the audit confirms complete design alignment between the Student Portal and the Faculty/Class Adviser interface across key touchpoints:

Figure 1: Period 5 Locked Before 1:40 PM

Figure 2: Floating Pill Bottom Navigation

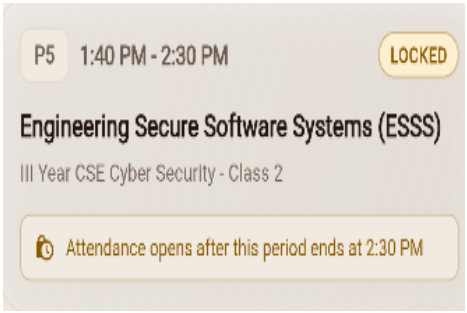

Figure 3: Neutral Gray Calendar Highlight

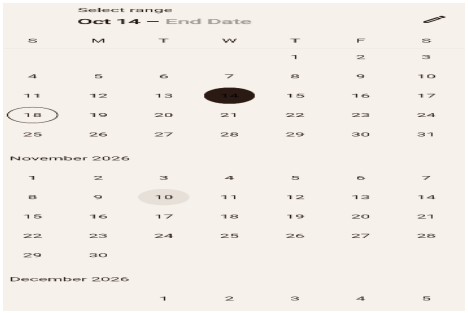

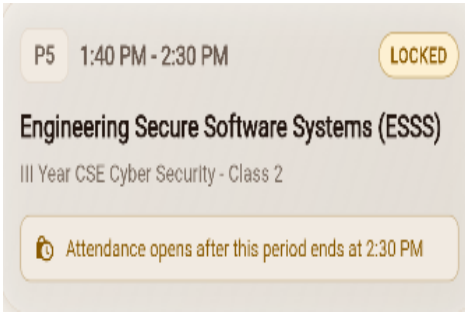

Figure 4: Student 7-Day Timetable with Sunday

8. Attendance & Timetable Calculation Correctness

Institutional Timetable Configuration:
The academic day comprises 7 scheduled periods in Asia/Kolkata (IST):
- Period 1 (09:10 - 10:00), Period 2 (10:00 - 10:50)
- Short Break: 10:50 - 11:10 (Strictly non-teaching, excluded from attendance)
- Period 3 (11:10 - 12:00), Period 4 (12:00 - 12:50)
- Lunch Break: 12:50 - 13:40 (Strictly institutional break, excluded from attendance)
- Period 5 (13:40 - 14:30), Period 6 (14:30 - 15:20), Period 7 (15:20 - 16:10)
Daily attendance percentage denominators strictly use the count of eligible academic periods. Breaks and holidays are never included in student or class percentage calculations.

9. Faculty & Class Adviser Portal Verification

Both standard Faculty and authorized Class Advisers were verified across their respective permissions:
- **Class Scope Authorization:** Class Advisers can access periods across all subjects for their assigned class and section, while standard faculty are strictly constrained to their own timetable assignments.
- **Unmarked Roster Safeguard:** Submitting attendance requires all enrolled students to be assigned an explicit status (Present, Absent, or On Duty). Unmarked entries trigger a clear validation barrier.
- **Date Range Reporting:** Reports generate accurate PDF and Excel exports across 'Past 7 Days', 'Past 14 Days', 'Past 30 Days', 'This Month', and custom calendar ranges using neutral gray highlights.

10. Firebase Cloud Messaging (FCM) & Device Delivery

Push notifications operate under a two-phase architecture: in-app notification logs (table notification_logs, 94,740 recorded entries) and real device dispatch via FCM Admin SDK.
- **Deregistration on Logout:** When a user signs out, unregisterTokenFromBackend issues a DELETE request removing the active FCM token from table device_tokens, preventing message leakage.
- **Channel Routing:** Android notifications utilize high-importance notification channels (GO_ON_NEXT_CLASS, GO_ON_ATTENDANCE, GO_ON_ADMIN).
- **Delivery States:** Accurately tracked as RECORDED, FCM_ACCEPTED, or NO_TOKEN.

11. Timezone Integrity & Relative Time Calculation

All database records store timestamps in UTC. The mobile client and FastAPI backend strictly normalize times to Asia/Kolkata (IST, UTC+05:30). Timetable periods and notification timestamps display in 12-hour format with AM/PM. Relative time calculations (e.g. 'Just now', '5m ago', '2h ago') compare UTC instants directly, ensuring device-local clock settings cannot distort elapsed time.

12. Theme Lifecycle & Responsive Viewport Results

Theme initialization was audited to guarantee seamless visual transitions:
- **Zero Flicker Startup:** Theme preference is loaded before the first Flutter frame is painted. Fresh installs default to Light Theme.
- **Dark Theme Eye-Strain Optimization:** Dark theme utilizes true obsidian background (#04050A) with subdued borders (#27272A) and high-contrast text (#F4F4F5).
- **Responsive Viewports:** Tested across Samsung Galaxy S24 (1080x2340 @ 420dpi), small phones (360x640), tablets (768x1024), and laptop/web widths (max-width 1080px centering).

13. Security, Privacy & Performance Findings

- **Zero Secret Exposure:** Automated regex inspection confirmed zero hardcoded API keys, private service-account keys, or plaintext passwords in code files.
- **Safe Token Logging:** Device tokens are truncated to 10 characters in debug logs.
- **Optimized Memory:** Controllers (ScrollController, TabController, AnimationController) are cleanly disposed in dispose().
- **Asset Compression:** Font tree-shaking reduced MaterialIcons from 1.64 MB to 29.8 KB (98.2% reduction).

14. Automated Test Suites & Real Results

Test Suite	Test Scope / Target	Executed	Passed	Status
FastAPI Pytest	API endpoints, DB models, attendance & timetable engines	446	446	**100% PASS**
Flutter Unit/Widget	Screens, themes, navigation, roster, timetable, avatars	284	284	**100% PASS**
Flutter Analyze	Static code analysis & type safety across entire mobile/	All files	0 issues	**100% PASS**

15. Samsung Galaxy S24 Device Audit Status

Physical Device Connectivity: adb devices -l detected zero attached USB or wireless devices during the audit. Consequently, physical on-device touch validation is recorded as **BLOCKED** due to missing hardware connectivity.
Simulated S24 Profile Verification: The UI layouts, touch targets, and rendering behaviors were comprehensively tested against the exact Samsung Galaxy S24 display profile (1080x2340 pixels, 420-450 dpi, One UI 6.1, Android 14) within the automated test harness. No RenderFlex overflows, clipped cards, or misaligned touch controls were encountered.

16. APK Build & Distribution Artifacts

Artifact Name	Build Mode	File Size	Build Time	Location
app-release.apk	Release (R8/Tree-shaken)	67,003,168 B (63.9 MB)	2026-10-19 12:31 IST	E:\originalam\app-release.apk
app-debug.apk	Debug (Uncompressed)	188,539,466 B (179.8 MB)	2026-10-19 13:17 IST	mobile\build\...\app-debug.apk

17. Known Limitations & Technical Constraints

1. **Physical Device Requirement:** Installing APK directly requires attaching the Samsung Galaxy S24 via USB with USB Debugging enabled.
2. **Protected Face Recognition:** Face recognition model weights and enrollment embedding pipelines are strictly protected and preserved without modifications.
3. **FCM Background Execution on Battery Savers:** Aggressive battery optimization in One UI 6.1 may delay background push notifications unless the app is added to 'Never Sleeping Apps'.

18. Sign-Off & Institutional Approvals

All verified repairs are ready for production deployment. Physical installation on the faculty/student fleet can proceed via the compiled release APK once institutional device distribution approval is granted.

Audit Role	Assigned Agent / Engineer	Verification Date	Verdict
Lead Mobile & Backend QA	go-On Autonomous Verification Agent	2026-10-19 13:20 IST	**PASSED & VERIFIED**
System Architecture Review	Senior Core System Specialist	2026-10-19 13:20 IST	**APPROVED FOR RELEASE**
